Art Unit: 1755

The article cited in the information disclosure statement of 23 September 1993 was considered with respect to the provided concise explanation of this article.

The disclosure is objected to because of the following informalities: The meaning of variables a-l are not defined in the specification. It is suggested to write out the names of the compounds, instead of using arbitrary formulas. Page 3 teaches Cu is contained in the perovskite compound, but pages 4, 14 and the examples all teach the Cu is contained in the ceramic not the compound. The teaching on page 3 should be amended to reflect what is taught in the rest of the specification. Appropriate correction is required.

Claim 11 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification teaches the perovskite compound in the process set forth in claim 11 is non-stoichiometric. Claim 11 teaches it is stoichiometric. It is noted claim 12, which depend from claim 11 also teaches a non-stoichiometric perovskite. It appears y should be inserted in the formula of claim 11 or the fact that the perovskite is non-stoichiometric should appear in claim 11.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Variables a-1 in claims 9 and 11 are not defined. It is suggested to write out the names of the compounds, instead of using arbitrary formulas. Claims 1-8 and 10 imply Cu is contained in

Art Unit: 1755

the perovskite compound, but pages 4, 14 and the examples of the specification all teach the Cu is contained in the ceramic not the compound. Claim 1 should be amended to reflect what is taught in the rest of the specification.

Claims 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-11 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action.

There is no teaching or suggestion in the cited art of record of the claimed non-stoichiometric ceramic or the claimed process for forming a ceramic comprising a non-stoichiometric lead free perovskite piezoelectric compound. U.S. patent 6,387,295 is cited as of interest since it is the U.S. equivalent of JP 2000-313664 and which is the closest art of record. It teaches a lead-free piezoelectric ceramic composition where in Cu is contains in a perovskite A(Nb,Ta)O₃, where A is K or K and Na.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa Koslow whose telephone number is (571) 272-1371. The examiner can normally be reached on Monday-Friday from 8:00 AM to 3:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Bell, can be reached at (571) 272-1362.

The fax number for all official communications is (703) 872-9306.
